

Find out more about the Sleeve Gastrectomy.

If you are considering a Sleeve Gastrectomy procedure we would like you to be as well informed as possible.

What are the risks of Sleeve Gastrectomy?

As with any type of surgical procedure there are operative and long term complications associated with the Sleeve Gastrectomy

Operative Complications include:

Bleeding
Infection
Clots in the Lung (Pulmonary Emboli)
Clots in the Leg (Deep Vein Thrombosis)
Complications due to the anaesthesia
Leak from the staple line
Injury to surrounding organs

Long term complications include:

Port site hernias
Pouch Dilation
Reflux
Ulcers

Be reassured that in the hands of an experienced surgeon the risks associated with the Sleeve Gastrectomy are small. In addition patients should be aware of the potential issues of excess skin following surgery. Our female patients are advised to avoid pregnancy for 18 months to avoid serious complications to pregnancy.

Always remember that the Sleeve Gastrectomy is a tool to help you lose weight, it is not a cure for obesity.

Weight regain is possible if long term changes to diet and lifestyle are not undertaken.

Is the Sleeve Gastrectomy a reversible procedure?

No. The Sleeve Gastrectomy is a permanent procedure

How long will I have to stay in the Hospital?

It is normal to stay in the hospital for 2-3 nights following your surgery

Will I need time off work?

Yes. The length of time you will require off work will depend on your profession. As a guide it is normal to take between 2-4 weeks off.

Who will I see before my Surgery?

Your first appointment will be with Mr Irukulla, Upper GI and Bariatric Consultant Surgeon. You will then see the Bariatric Specialist Nurse, Natasha Smith and the Bariatric Dietitian, Deborah Norman.

Will I have to follow a special Diet?

Yes. You will be required to follow a Pre-op Liver Shrinkage diet for 1-2 weeks prior to your surgery. This is a diet low in fat, sugar and carbohydrates. The diet helps reduce the size and weight of the liver.

After surgery you will reintroduce food slowly over a 6-8 week period. The stages consist of a fluid diet for 2 weeks, pureed diet for 2 weeks, soft mashed diet for 2 weeks and then normal healthy food.

Our Dietitian will discuss both the pre and post-surgery diets with you during her consultation.

We're here to help with any questions you have about any of the procedures we offer.
